Notes

1. Specify solution or solid measurement. If solution measurement, write the deuterated solvent.
2. Write the specific experimental details required. For example, coupling/decoupling of specific or all other nuclei, 2D NMR, etc.
3. If you are providing premade sample solutions, ensure it is a clear solution and contains sufficient amount of deuterated solvent.
4. For solid-state measurements, samples should be well ground fine powder.
5. Incomplete forms will be returned.
